WHAT IS THE PROJECT?
The Rebuild by Design - Hudson River Project is a comprehensive urban floodwater management strategy to reduce the flood risk from storm surge and rainfall flood events to flood prone areas within the Project Area, which comprises the entire City of Hoboken, and adjacent areas of Weehawken and Jersey City. The US Department of Housing and Urban Development (HUD) awarded $230 million to the State of New Jersey for the Project, which includes the design and environmental impact analysis of the overall comprehensive master plan of the entire project (including the Resist and Delay, Store, Discharge components) and funding for the construction of the Resist components (coastal storm surge projects).

WHAT’S HAPPENING NEXT?
During this phase of work, the Resist components (flood control structures to resist storm surge) will be designed. NJDEP is engaging the public and stakeholders in the Project Area to participate in the design of the Resist components (see map below).

At this meeting you will:
• Get an overall update on the Project;
• Look back at what was accomplished during the feasibility phase and past milestones for the project;
• Meet or be re-introduced to the NJ DEP Project Team;
• Hear how we selected the Design Team, led by AECOM;
• Learn about upcoming design zone workshops, when and how to participate in the design phase.
